inVerde is GEA S.r.l. brand for Home & Garden.
inVerde product line is specifically designed for pest
monitoring in home and garden environments.

MISSION

To be the leading manufacturer in the Home & Garden
market, for pest control and monitoring, thanks to the
innovation and effectiveness of our products.

VISION

Taking care of home and garden environments,
guaranteeing eco-sustainability and low environmental
impact, in line with consumer market trends that are
increasingly attentive to these issues.

TRAP FOR FOOD MOTHS

Pre-activated cardboard traps with a special pheromone for food moths.

- ✓ EASY-TO-USE MONITORING DEVICE
- ✓ INSECTICIDE-FREE
- ✓ ATTRACTS ONLY TARGETED INSECTS
- ✓ EFFICACY UP TO 3 MONTHS
- ✓ DOUBLE POSSIBILITY OF USE THANKS TO THE DOUBLE-SIDED ADHESIVE ON THE TRAP:
 - APPLIED TO THE DOOR
 - APPLIED TO THE BASE OF THE SHELF

TARGETED PESTS

Food moths
(*Ephestia kuehniella*, *Plodia interpunctella*)

ENVIRONMENTS OF USE

In kitchens, pantries, cupboards, shelves and **all places where food is stored.**

MONITORING PERIOD

All year round, especially between **March and October**, when there is an increase in this type of pest.

PHEROMONE AND ATTRACTANT WITHOUT INSECTICIDE

NON-TOXIC

ATTRACTS ONLY TARGETED INSECTS

TRAP FOR *Popillia japonica*
MASS®

Pheromone trap for monitoring the Japanese beetle (*Popillia japonica*), polyphagous insect and pest of numerous fruit and ornamental crops.

TARGETED PESTS

Japanese beetle (*Popillia japonica*)

MODE OF ACTION

The presence of the sex pheromone and the floral attractant makes it possible to capture both sexes. The neutral colour makes the trap selective towards the Japanese beetle, avoiding attracting pollinating insects.

ENVIRONMENTS OF USE

In domestic gardens and vegetable gardens. Among the most affected crops are: Maple, glycine, rose, bramble, lime, elm, maize, apple, peach, soybean and vine.

MONITORING PERIOD

All year round, especially in the months between **May and August**.

ENVIRONMENTS OF USE

Near:

- green areas where the presence of uncultivated grass makes the environment agreeable to rodents
- in warehouses
- in grocery store backrooms
- in waste collection areas

MONITORING PERIOD

All year round, especially in the period between **October and April**, when there are peaks in infestation intensity due to lower outdoor temperatures.

- ✓ WITH PLANT-DERIVED GERANIOL ACTIVE INGREDIENT
- ✓ FOR ENVIRONMENTAL TREATMENTS
- ✓ NO GAS SPRAY
- ✓ PLEASANTLY SCENTED
- ✓ FOR PROFESSIONAL AND NON-PROFESSIONAL USE

TARGETED PESTS

Tiger mosquito

ENVIRONMENTS OF USE

It can be used in the following fields of application:

- Housing areas;
- public places and community venues;
- holiday resorts: hotels, campsites, farmhouses, hostels, etc.
- in productive areas;
- in composting facilities;
- in transport vehicles;
- in port and airport areas, means of transport and railway stations.
- in green areas: such as hedges, gardens, tree-lined avenues for tiger mosquito control.

MONITORING PERIOD

All year round, especially between **March** and **September**.

1	2	3	4	5	6	7	8	9	10	11	12

INSTRUCTIONS FOR USE

It should be sprayed from a distance of about 30 cm on surfaces such as windowsills, edges, door frames, cracks, outdoor curtains, green areas or in general in places where mosquitoes can settle.

INSTRUCTIONS FOR USE

Ready-to-use product. Apply as it is, delimiting the area to be protected. One litre of product is sufficient for an application of approximately 20 linear metres.

Its special composition allows long-lasting action. For a preventive action, simply distribute the product once every 15/20 days.

CHROMOTROPIC PHEROMONE LINE

ODOURLESS

EASY TO USE

INSECTICIDE-FREE

PHEROMONE CHROMOTROPICS FOR FRUIT PLANTS

The Pheromone Chromotropic Pheromone glue trap for fruit plants is an easy-to-use pheromone glue trap. Thanks to the chromotropic action performed by the yellow colour of the trap, and the attractive action provided by the specific pheromones used and released by the droplet in the centre of the adhesive surface, the target insects orient themselves towards the device and become entangled in it.

- ✓ RESISTANT TO BAD WEATHER
- ✓ DOUBLE ATTRACTIVE ACTION: CHROMOTROPIC AND PHEROMONIC
- ✓ STRAP BUILT IN THE TRAP

TARGETED PESTS

Pheromone-based glue trap suitable for monitoring Codling moth (*Cydia pomonella*) and the oriental fruit moth or peach moth (*Cydia molesta*).

ENVIRONMENTS OF USE

Used on fruit plants

MONITORING PERIOD

All year round, especially between April and July.

INSECTICIDE-FREE

CHERRY

The Chromotropic Pheromone Trap for cherry Trees is an easy-to-use pheromone glue trap. Thanks to the chromotropic action carried out by the trap's yellow and red colours, and the attractive action provided by the two specific pheromones used and released by the droplet in the centre of the adhesive surface, the target insect is oriented towards the device and becomes entangled in it.

- ✓ RESISTANT TO BAD WEATHER
- ✓ DOUBLE ATTRACTIVE ACTION: CHROMOTROPIC AND PHEROMONIC
- ✓ STRAP BUILT IN THE TRAP

TARGETED PESTS

Pheromone-based glue trap, suitable for cherry fly monitoring (*Rhagoletis cerasi*).

ENVIRONMENTS OF USE

Used on cherry trees.

MONITORING PERIOD

All year round, especially between **March and June**.
