TECHNICAL DATA SHEET

1. TRADE NAME: **BETA 2**
   Monitoring device for detecting the presence of mice like *Mus musculus musculus, Mus musculus domesticus*, rats like *Rattus rattus, Rattus norvegicus* and other harmful rodents.

   Monitoring device to be used to maintain regular surveillance of pests in a domestic setting for a defined period of time.

2. PRODUCT CODE: **P-03019IN**

3. PICTURE:

4. TECHNICAL SPECIFICATIONS:
   Beta is made of polypropylene. It's strong enough to resist to bad weather. It's particularly indicated for external uses.

   It is composed of:
   - N.2 entrances;
   - N.1 stick to place the rodenticide;
   - Removable internal tray;
   - Double safety closing system+ 1 key to open it;
   - Wall fixing device;
   - Internal space to place a glue trap (Book Refill P-02019) in all those areas where rodenticide can not be used.

   Trap size:
   - **Length:** 230 mm
   - **Width:** 190 mm
   - **Height:** 95 mm

   Colour: As in the picture

   InVerde products could undergo necessary or opportune technical changes, at any given time, without prior written notice to customers.

TECHNICAL DATA SHEET

5. HOW TO USE:

Place Beta 2 in the following places:

- Green areas, where the presence of overgrown grass is particularly appreciated by rodents;
- Near gardens, green houses and grasslands;
- Along the external perimeter of food industries;
- Inside storehouses;
- In the back of supermarkets;
- In waste collection areas;

We suggest you to give a number to each trap and indicate its placement in the monitored area plan, in order to facilitate the check during the periodic monitoring.

Theoretical covered area: place the device at a distance of 5-10 meters the one from the other, according to the assumed pest infestation.

Suggested monitoring period: all the year long, especially in the period between October and April, in which it is registered peaks due to the external temperature reduction.

Suggested frequency of the controls: at least twice daily. Change or clean the trap according to the pest infestation.

The use of the trap in damp and dusty places does not reduce the product functionality over time.

Storage conditions: in a cool and dry room, temperature below 25°C and R.H. below 55%.
If well stored (intact packaging), the product shelf life is 3 years.

Information on the Best Practice: Can be used in agri-food environments.
In order to respect animal welfare, we recommend a frequency of control of the adhesive traps equal to several times / day (at least 2), as recommended by the Guideline on Best Practice in the Use of Rodenticide Baits as Biocides in the European Union, issued in September 2013 from EBPF (European Biocidal Products Forum).
If, in the control phase of the adhesive trap, a mouse was found alive, it must be killed quickly and humanely. A strong blow to the head is the most advisable method according to the 2006 Animal Welfare Act UK. Absolutely avoid drowning.
If catches of non-target organisms are found, contact a wild animal recovery center (or a wildlife center). The removal of the live animal by unskilled personnel can cause further suffering and injury. Try to remove the animal with liquid paraffin, and then clean it with soap and water, only when it has been impossible to find professional help.

TECHNICAL DATA SHEET

6. PACKAGING AND SPARE PARTS:
- Case: 6 pcs per display

7. DISPOSAL CONSIDERATIONS:
Waste disposal should be in accordance with existing Community, National and local regulations.
